FLEXI-PUNCH ELECTRO-PNEUMATIC PERFORATOR

The Stewart's of America Electro-Pneumatic Punch Perforating unit is a field proven design. The machine has established itself in the flexible packaging industry as a preferred solution for consistent and reliable perforations in film, bags, paper and other products. Standard and optional functions let the machine efficiently produce round-hole patterns in a web that is in continuous or intermittent movement.

KEY FEATURES INCLUDE:

- Touch screen control system for accuracy and reliability.
- On-board optical encoder for exact line speed and movement following ability.
- Straight rows of holes, or staggered patterns.
- Optional Computer Control allows for complex hole patterns.
- Sophisticated, rock steady airflow control system.
- Air filtration and pressure control system.
- High Speed air/electric valves with fine tuning of open time to match product requirements.
- Punches clean round holes, butterfly, cross cut holes from 3.175mm through 11.15mm in 1.59mm increments. Other hole sizes are available upon request
- Reads print marks, signals from bag machines and other units, or an optical encoder to produce single bags, bags on a roll, perforated rolls, etc.
- Continuous operation for perforated rolls.
- Standard portable frame with rollers and casters.
- Standard 100% duty cycle cyclonic vacuum system for chip collection.
- Dies can be re-sharpened to provide long lifecycle.
